

ABSTRACT OF THE DISCLOSURE

1
2 A suspension rack assembly includes a main body, an anti-theft lock,
3 an upper secondary body, and a lower secondary body. Thus, the suspension
4 rack assembly can be used to suspend a single tool or multiple sets of tools. In
5 addition, the suspension rack assembly can be carried on the user's waist.
6 Further, the hand tool is fixed on the anti-theft lock and the support rack of the
7 main body rigidly and stably, thereby providing an anti-theft function.
